**DISPOSAL
BIODEGRADABLE**

Rhino Wood requires no special disposal, and can be left to biodegrade or disposed like any natural timber, without having any negative impacts on the immediate environment.

1

SOURCE

Rhino Wood only uses pine sourced from sustainably managed plantations within South Africa.

4

USE

Rhino Wood can be used in all the same applications as timber sourced in our ever diminishing natural forests.

2

PRODUCTION

The compound used during the patented process is a bi-product usually destined for landfill. By up-cycling the compound Rhino Wood is further contributing towards environmental stewardship.

3

PRODUCT

The final product contains zero toxins and no volatile organic compounds (VOC's), while sharing almost all the same physical characteristics as a traditional hardwood.
